## Hot perforation technology

PML manufacture a range of micro perforation machines and supply custom pinned tooling for existing machines.

Hot needle micro perforation machines are specifically designed to perforate poly-based materials at speeds up to 300m/min with the following benefits;

- Latest hole technology
- Integrated speed control between the pin and web
- Infra-red heating system with instant heat
- Quick pattern change
- Accurate pin penetration control
- Precise temperature control
- Energy efficient drive technology
- Touch screen control system
- High efficiency insulation

Perforation machinery Ltd have developed perforating solutions for a wide range of applications.

- Hygiene and medical industries
- Packaging industry
- Filling of powder materials
- Tape manufacturers
- Moisture, vapour or air flow control materials

Let us help you with our innovative approach to perforation engineering...
